

Shaping the Future
with Green Hydrogen.

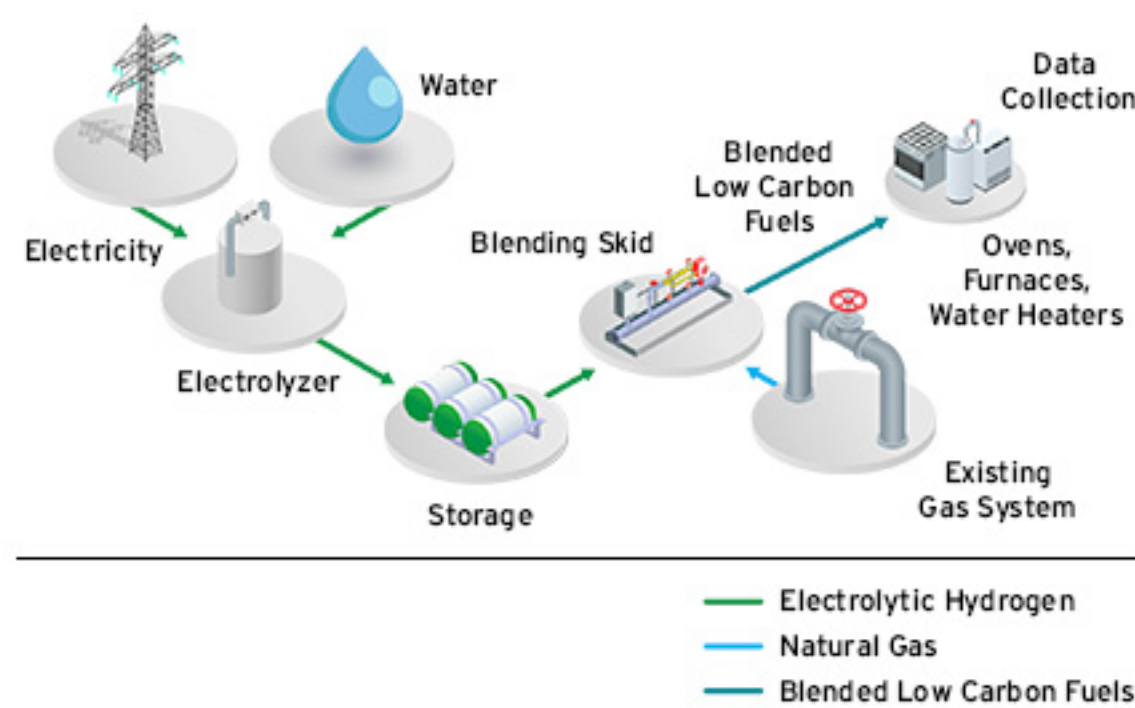

On February 17th, 2022, SoCalGas [announced](#) our proposal to develop the [Angeles Link](#), an energy infrastructure system that could deliver reliable green hydrogen to the Los Angeles Basin for use in heavy-duty transportation, industrial processes, electric generation, and other “hard-to-electrify” sectors of the Southern California economy.

In the News

On September 8th, SoCalGas, SDG&E and Southwest Gas filed a joint application with the CPUC detailing three proposed hydrogen blending demonstration projects. If approved, the projects will build upon recommendations in the CPUC’s recent “Hydrogen Blending Impacts Study” performed by UC Riverside by blending hydrogen at concentrations up to 20% of pipeline volumes in identified distribution systems. These blending projects are separate from the Angeles Link proposal, which is proposed to be a dedicated green hydrogen infrastructure system.

For more on our proposed hydrogen blending project on the UC Irvine campus, read this [S&P Global article](#).

Application Update

Legal briefing has concluded at the California Public Utilities Commission (CPUC) regarding our proposal to establish an Angeles Link Project Memorandum Account for recording incremental costs associated with the stakeholder engagement and engineering, design, and environmental work necessary to develop Angeles Link. The CPUC will next develop a proposed decision regarding the establishment of a memorandum account, which is anticipated later this year.
